Agenda:

### 1. How Windows Vista brings additional benefits to my company???

#### Enable Your Mobile Workforce

Today, more businesses are relying on an ever-expanding mobile workforce as a way to enhance their scope of service and reduce enterprise costs associated with supporting a large on-site staff. Windows Vista gives mobile professionals easier and more secure access to corporate resources so they can readily collaborate with colleagues—both on and off the network. They will also find it easier to make wireless connections and synchronize mobile devices.

#### Improve Security and Compliance

Protecting your business information and complying with regulations places increased demands on your IT infrastructure. More sophisticated data protection and auditing capabilities in Windows Vista help simplify IT management and can help lower costs for regulatory compliance. In addition, Windows Vista helps organizations manage security risks by protecting information and services in a more controllable and secure environment.

#### Optimize Your Desktop Infrastructure

Meeting the increasingly complex demands that are placed on your IT systems doesn't have to be increasingly expensive. Windows Vista is designed to be less expensive to deploy and support, and to offer you a better return on your IT investments.

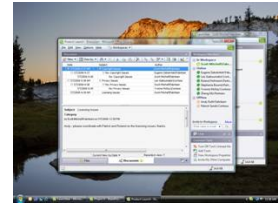

### 2. Does Office 2007 matters to me???

Microsoft Office 2007 provides people at home or work with a comprehensive set of tools that helps them gather and consolidate virtually any type of information, find what they are looking for quickly, and easily share information with others across geographical or organizational boundaries so they can deliver better results faster.

### Simplify Working Together

Office 2007 enables you to easily work with colleagues, partners or customers inside collaborative workspaces.

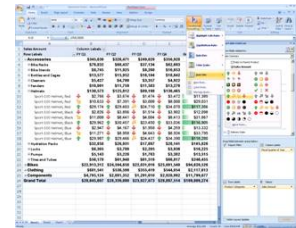

- Office Groove 2007 enables you and your team to work together effectively inside collaborative workspaces that put team members, tools, and information in context.
- Users can see which team members are online with indicators of member presence in Groove workspaces, and they can exchange messages using the chat tool in Office Groove 2007.

### Better Information Insight

Office 2007 extends the capabilities of individuals to create, gather, and analyze data easily.

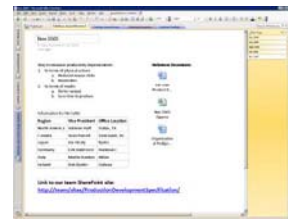

- The new Instant Search in Office Outlook 2007 helps you quickly find the e-mail messages.
- Office Excel 2007 makes it easier to analyze data quickly with powerful new visualization tools.
- Office Access 2007 offers an easy way to compile and track information from different sources so you can quickly filter data.

### Create and Manage Content

Office 2007 provides tools that help you create and manage content more efficiently and effectively than ever before.

- Office OneNote 2007 enables you to work more productively by helping you organize and consolidate disparate pieces of project-related information, including digitally handwritten notes, audio and video recordings, formatted documents, and still images into an OneNote digital notebook.
- With Office Word 2007, you can share many types of data, such as documents from a SharePoint document library or structured data from business applications.
- Working with Office Groove 2007 helps ensure your information has enhanced security, even on portable computers and wireless networks.

## 3. Anywhere Access – Can Unified messaging solution helps my business???

### Exchange Server 2007 brings you to practical:

- Single inbox for e-mail, voicemail, and fax
- Voice access from regular phone to retrieve information on your email server
- Speech-enabled to control your personal mailbox
